

Redefining interiors with stylish, durable, and modern switch boards that blend technology with design.

POWER, STYLE, INNOVATION.

Switch boards designed with precision, elegance and performance for homes that demand the best.

Not just switches—an upgrade to your lifestyle.

Robust Metal Engineering

Experience strength and precision with our meticulously crafted metal switchboards. Designed for both form and function, they bring an industrial-chic edge and long-lasting performance to your electrical solutions.

A range that redefines luxury

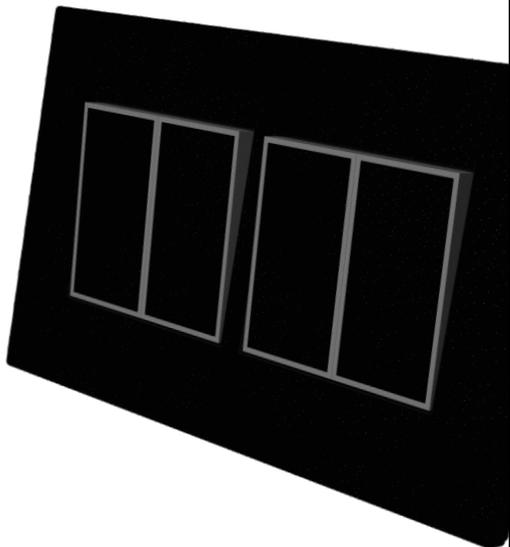

Switches designed for aesthetics & performance

TG9 Series is a modular product range which is designed to satisfy the requirements of electrical installations in modern buildings.

The range includes switches, sockets, fan regulators & dimmers, hospitality products, acoustic and optical signaling products, cover plates in various materials etc.

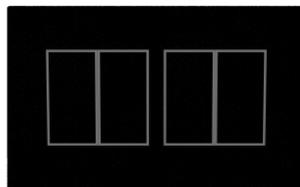

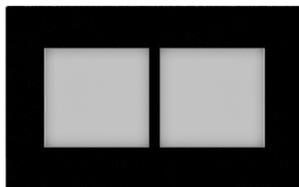

Modules such as switches, sockets etc. are made to a standard size (module) and are mounted on frames.

Front plates can be changed at any time without disturbing the wiring-in order to adapt to changes in the building interiors.

Smooth Operation

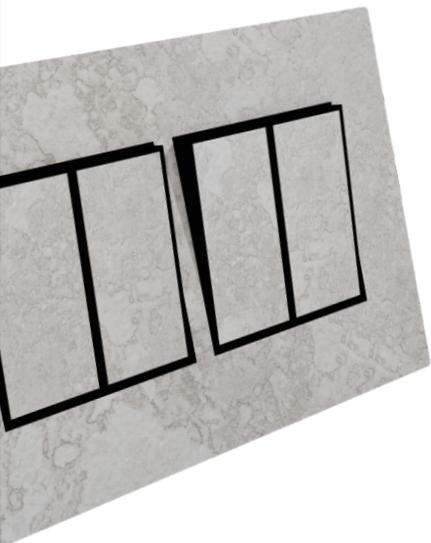

Mechanism designed for flawless movement

The transfer of motion from the dolly to the mechanism inside has been completely restructured. The front metal dolly is shielded from the live parts by a plastic component that is solidly riveted to it, thus providing adequate insulation. This plastic part also gives the a smooth dolly the required cushioning for

a smooth movement. The geometry of the spring in the contact mechanism is designed in a way so as to reduce the wear while switching even in arduous conditions.

An increase in the quantity of silver in the contacts also helps in reducing the electric arc considerably, thereby ensuring a trouble-free long life for the mechanism. Smoothness of operation imparts the luxury feel o the product. A soft click is all it takes to switch a light on.

Modern Marble Statement

Make a bold design statement with our stunning marble switchboards. Combining timeless material with sleek aesthetics, they infuse any room with an aura of opulence and contemporary grandeur.

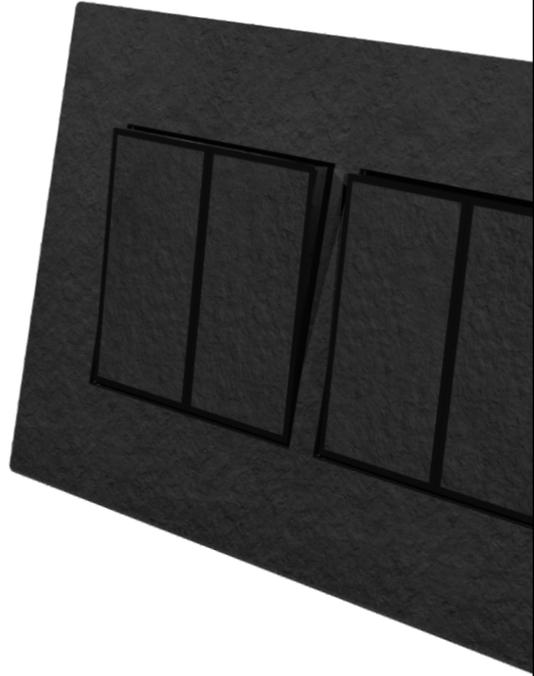

TG9 Series products are designed for durability and flawless performance even in arduous conditions. The products are mounted in a way that the entire pressure of wires in the junction box is borne entirely by a sturdy bi-material frame,

The bi-material support frames in TG9 Series is the result of several man-hours of research and

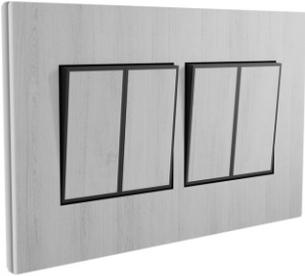

development. Bi-material frames are a combination of steel and engineering grade plastic.

Cover plates have different combinations of holes and windows. Holes are meant for switches and fan regulators, while the windows are meant for all other modules.
